Comments from Risk Management
<p>The management of interest rate risk against interest rate gap limits is supplemented by monitoring the sensitivity of financial assets and liabilities to various interest rate scenarios. The following table shows the current results from the net present value test as well as the stress tests that are run weekly on the cover pool. The table shows both the net present value for assets and liabilities as well as the ratio of the net present value to the base value of assets and liabilities. All numbers are in ISK millions.</p> <p>The net present value test is labelled „Base“ while the stress tests on the interest rate level (100 bp) are labelled by the name of the risk factor that is being changed and the direction in which it is being moved.</p>
